1st step - renovation/transformation of the goat house into a living house - approx. 70m²

vista / glance

2nd step - doing the drawings and the model

3rd step - building it

eight images of the finished studio.02 - approx. 70 + 70m²

resumen / brief description >

studio02 - casita we renovated, transformed and built because we needed more space in Casqueiro. we developed the whole project in close collaboration with Curt and Dagmar Scheiderbauer, who where also realizing their wish, because durig their many stays in Casqueiro this was their living- and studio-house. during our presence in Linz (see file > a park for L.A.) we met Fredl the Carpenter, who helped us then to do the wooden works for our installation. we liked so much how he was solving wood problems that we invited him to come for some weeks to L.A. and build this house with us. two years before we already were renovating and transforming the 'goathouse', now we continued building studio02. studio02 is done as a pine-wooden structure without any nails or screws ('gear tooth forming') and overdimensions an old technique used in a lot of houses on the spanish atlantic northcoast: 'la galeria' which makes passive use of solar energy. thats why all surfaces which look to the sun are as big as they can be. the idea was to see if this works well (no heating, no air condition..) on such a scale in the asturian climate - it does! the complete house was built in 9 days between us and 5 friends.

en colaboración con / in collaboration with > Curt und Dagmar Scheiderbauer, Fredl the Carpenter, Alvaro Garcia Lanza, Pablo Carrera, Freddy the Cook, Paco 'Pitusa'
